MAGNI SCREEN
magnetic insect screens

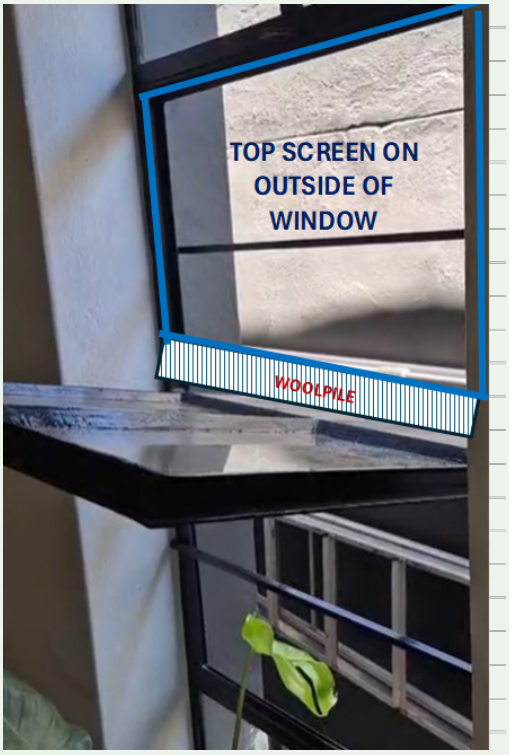

Screens for centre-pivot windows

A two-screen solution for a window that pivots in the middle.

One screen covers the opening above the pivot, and a second screen covers the opening below it. The screens fit on opposite sides of the window.

1 UPPER SCREEN

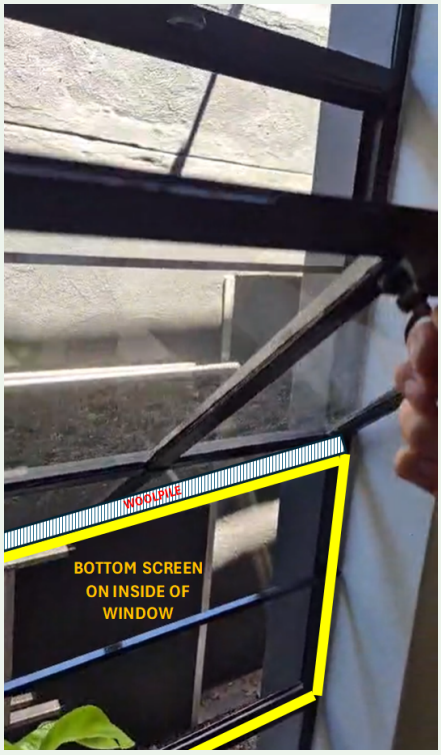

Outside the window

Woolpile is fitted along the **bottom edge** of the upper screen.

2 LOWER SCREEN

Inside the window

Woolpile is fitted along the **top edge** of the lower screen.

SEALING AROUND THE PIVOT

The woolpile on the bottom of the upper screen and the top of the lower screen closes the gaps around the pivot, helping to form a close-fitting insect seal.

Custom-made aluminium-framed insect screens
