Windows with Trellidor security systems

Magniscreen can be used on windows fitted with a Trellidor security system. The screen arrangement depends on the window and the space between the security bars.

1 FULL-WINDOW SCREEN

The screen must cover the full window from reveal to reveal (from one side of the window recess to the other). The magnets attach to the Trellidor frame.

2 TWO SMALLER SCREENS

Two smaller screens are used together to cover one single window opening.

Where the spacing allows, smaller screens can sometimes be slid through the openings between the Trellidor bars.

Suitability depends on the bar spacing and screen size.
